Real time rate benchmarking provided on each load

Automate redundant processes

Speed up carrier tendering & rate negotiation.
No more refreshing load boards and inboxes.

Reporting you'll use.

See buying behavior, carrier activity, market activity all in one place.

The screenshot displays the Shipment Builder interface, which is a web-based application for managing shipping. It shows a form for creating a shipment with multiple stops. The top section is labeled "Stop 1" and includes fields for "Address" (Van), "Start Date" (04/10/23), "Start Time" (00:00 (24 hr)), "End Date" (MM/DD/YY), "End Time" (00:00 (24 hr)), "Stop Type" (Pickup), "Live", and "Loading Type". Below this is a note field: "Include any relevant stop notes here" and a "Customer Ref." dropdown. There are buttons for "Add Accessorial", "Swap", and "Add Ref. Number". The middle section is labeled "Stop 2" and has similar fields: "Location" (3150 North Alta Vista Drive, Flagstaff AZ 86004), "Appointment" (FCFS), "Start Date" (MM/DD/YY), "Start Time" (00:00 (24 hr)), "End Date" (MM/DD/YY), "End Time" (00:00 (24 hr)), "Stop Type" (Pickup), "Live", and "Loading Type". It also includes a note field and a "Customer Ref." dropdown. A button "+ Add Another Stop" is visible. The bottom section is labeled "Commodity" and includes fields for "Commodity Description" (required), "Unit Type" (Pallet), "Unit Ct.", "Piece Ct.", and a "Hazmat" checkbox. A button "+ Add Another Commodity" is present. The right side of the interface shows sections for "Equipment" (Type: Van) and "Shipment Details" (Weight, Value, Number, off switch, Add button). A "Quote Watchers" section is also visible.
